

AROMATHERAPY

Aromatherapy is commonly seen as the diffusion of pleasant fragrances. This is true, but aromatherapy is much more than that. The suffix "therapy" shows that there is also a therapeutic approach to the use of plants and fragrances in our wellbeing. Aromatherapy is the medicinal use of aromatic plant extracts. These extracts offer numerous benefits to our physical and mental health.

The diffusion of these aromatic plant extracts (eucalyptus, mint, lavender...) has positive results on our general well being.

Our aromatherapy kit includes :

- A pump with connection to the generator
- A drum (to receive the fragrance)
- A suction pipe
- A tube for fragrance diffusion + T coupling (bridging on the steam line)

We can also offer a system with sanitisation pump, which starts at the end of the steam cycle and lets cleaning and disinfection products enter the steam room (contact us for more information).

DOORS

The steam room doors can sustain a constant temperature of 50°C, and 100% humidity. The SECURIT glass is 8mm thick.

For safety reasons, the steam room door always opens outwards.

An air inlet must be allowed for at the bottom of the door.

Door opening right = hinge on the right.

MUSIC

The waterproof speakers let you enjoy music inside your steam room.
